

# SMSWakeUp

## Automated software and patch updates, 100% installation success

Software and patch management is a complex task, with patch management alone estimated to contribute up to 30% of total IT costs. When computers are frequently shut down or in sleep mode, the task is made harder still.

### Wake up and update

SMSWakeUp™ automatically turns on computers for software and patch updates with Microsoft Systems Management Server (SMS)/System Center Configuration Manager (SCCM), increasing delivery success to 100%. Cutting the cost of delivery and reducing failure means SMSWakeUp can deliver ROI in less than three months.

Installed in over 2.5 million seats worldwide, SMSWakeUp is the first and best Wake-On-LAN product. Its success in organizations with 200,000+ seats illustrates SMSWakeUp's proven scalability.

### Key features and benefits include:

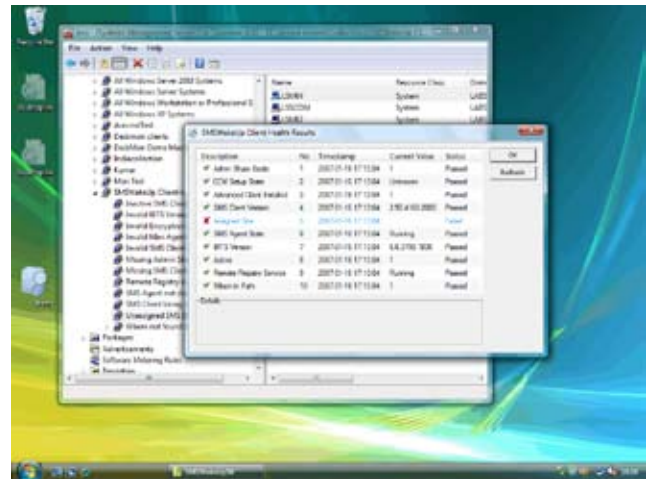

- Creates a 100% success rate for SMS/SCCM deployments
- Reduces software and patch deployment costs
- Speeds software deployment
- Minimizes network impact by using SMS/SCCM site hierarchy to stagger distribution
- Reports on SMS/SCCM clients and deployment success
- No router configuration required
- Integrates with NightWatchman to maximize cost and energy savings
- Full integration with SMS 2003 and SCCM 2007
- Configurable for any type of network

"SMSWakeUp... allows the entire desktop estate to be patched within the time required. SMSWakeUp is an essential complement to SMS 2003."

**Matt Jeavons, Wolverhampton Council**

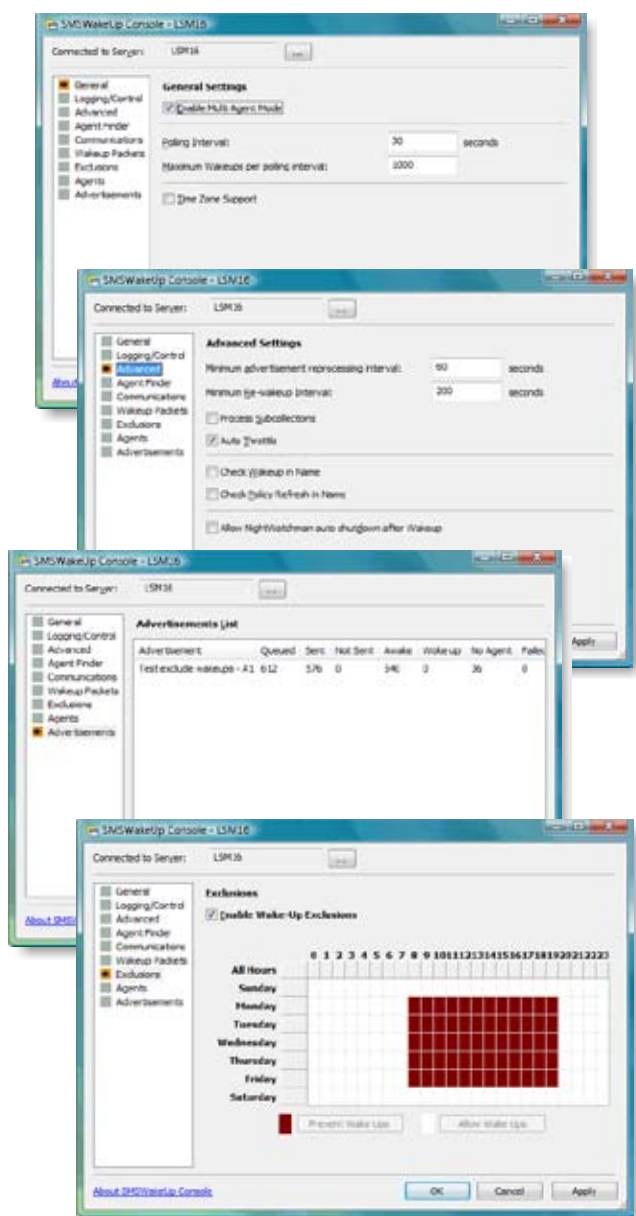

### Confidence in SMS/SCCM delivery

Although changes to systems should be routine, up to 75% of IT budgets are used to support existing systems. By freeing up support resources, SMSWakeUp enables IT departments to focus on the viability of the updates and patches themselves. So as well as saving money, SMSWakeUp boosts confidence in the SMS/SCCM delivery system.

### Complete integration with SMS/SCCM

SMSWakeUp scans the SMS/SCCM database to determine exactly when an SMS/SCCM distribution is scheduled. As soon as software is available to the targeted client systems, SMSWakeUp will start to send out remote wakeup packages across the network to prepare PCs to receive the software.

## Cost-efficient 24-hour patch management

Combined with NightWatchman, 1E's PC shutdown product, SMSWakeUp offers an integrated, round-the-clock approach to updates and patches that is focused on convenience and energy saving. Any PCs woken for updates by SMSWakeUp can be shut down by NightWatchman as soon as the task has finished, maximizing energy and cost savings.

## Faster delivery of new applications

Together with 1E's Shopping product, which automates software approval, deployment and license management, SMSWakeUp speeds desktop delivery so that users can receive software in just over two minutes.

## 1E Professional Services

By deploying SMSWakeUp with Professional Services from 1E, you can derive maximum value from your IT investments, fast.

Our expertise in Windows Management and close relationship with Microsoft enables us to deliver robust solutions efficiently in short timeframes. We leave our clients with the knowledge, tools and processes they need to manage the environment themselves.

SMSWakeUp offers 100% software update success with proven, rapid return on investment.
