

Secure your cloud email accounts with Harmony email and collaboration

O365/Gmail Health Check

Schedule a **Bytes** O365/Gmail Health Check Powered by **Check Point Harmony Email & Collaboration** to see how to protect against phishing, ransomware, and malware across your cloud email and collaboration environments.

Using **Check Point's** innovative and Patented technology, the Health Check will give you visibility of attacks that other email security solutions miss.

Email remains one of the most exploited attack vectors in IT, and with the surge in Artificial Intelligence capabilities malicious actors are generating zero-day software that is both harder to detect and quicker to launch.

Traditional signature-based protections and simple gateways are not enough - a layered approach is recommended that incorporates the same machine learning and sophisticated intelligence used to generate threats.

What to Expect

Reduces phishing reaching the inbox by 99.2%

Blocks zero-day attacks designed to exploit cloud email environments by leveraging advanced anti-phishing and sandboxing technologies.

Protects sensitive business data (DLP) from leaving the organisation.

Secures all lines of business communication, including Slack and Teams.

Get an idea of Harmony Email & Collaboration's capabilities with a walk-through demo video of the product [here](#).

See the product in action with demonstrated prevention of phishing, malware, account takeover and DLP.
