

Bytes

CYBER RESILIENCE ANALYSIS & ADVISORY SERVICES

Discover your resilience levels against attack – and take action

Would your security withstand the toughest cyber attacks - or crumble in the face of the simplest intrusions? Bytes can help you to increase your resilience through attack and defence simulations, strategic reporting and practical recommendations.

Checking the right defences

Bytes can offer a blended approach to cyber resilience analysis that tests your all-round security, so you don't make the mistake of strengthening one area and leaving another unguarded.

Advanced persistent threats (APTs), sophisticated attacks and zero-day exploits often make the headlines. But, in reality, breaches are more likely to arise from simple governance or control failures in areas such as missing patches, failures by third parties and weak identity management. We all know that everything must be secure, at all times – but doing this is a challenge, this is where the quality of your security matters.

Reflecting the real world

Our Cyber Resilience Analysis & Advisory Services will help you to discover your resilience levels against cyber attack that could arise from all manner of vulnerabilities. We'll simulate attacks, provide strategic reporting and offer practical recommendations, so you can increase your resilience - everywhere.

We know the landscape

As companies evolve, they often fail to keep up with cyber security. But our experienced consultants will help you to fix that. We offer flexibility — so you can pick the services that you want and do as much or as little in-house as you wish. Our services are designed to be complementary and can be built up over time.

With Bytes, you can mix and match a range of services ...

Check your defences

- Get an ISF security healthcheck
- Assess your supply chain
- Test your exploitability

Sharpen security

- Get leading security expertise
- Select the right solutions and re-run tests
- Evaluate certification readiness

Think strategically

- Review findings with your board
- Plan the best strategic response
- Align plans with your business

Maintain & certify

- Implement KPIs to measure controls
- Formalise processes at highest level
- Work towards certification
