

Cyera & Bytes Data Assessment

The first step to controlling your data - done differently.

Data is everywhere, across clouds, apps, and AI tools. Yet most organisations have lost sight of what they're protecting.

Bytes have partnered with **Cyera** to re-shape how organisations think about data.

It starts with visibility, but not the kind you've seen before. This is **faster, smarter, and built for the realities of modern data.**

Data is broken. Legacy tools are slow, noisy, and lack the visibility required to identify and protect business-critical information.

Data Loss Prevention (DLP) is drowning. Security teams are buried in false positives, unable to see the real risk.

AI is the newest data risk and the biggest opportunity. It's driving innovation while exposing sensitive information faster than ever.

CYERA

FROM CHAOS TO CLARITY

Agentless connection:

Cyera connects instantly, no installs, agents, or delays.

Unified visibility:

View data across cloud, SaaS, and on-prem in minutes.

AI-native classification:

No rules or RegEx needed; Cyera learns and identifies sensitive, valuable, and unique data.

Deep context:

Understand file ownership, location, usage, and risk, not just file lists.

Actionable insight:

Transforms data from mystery to clarity, enabling confident decision-making.

Cyera customers uncover 50%+ more sensitive data and cut manual effort by up to 80% in days, not months.

**TAKE THE
FIRST
STEP TODAY**

The **Cyera & Bytes** Data Assessment is your starting point. In just a few days, you'll see your true data reality, where it is, what matters most, and what to do next.
