

Bytes NETBACKUP POWER-UP

Get a health-check, performance bench-test, optimisation hit-list and strategy expertise ... all rolled into one and at no cost to you.

A NetBackup Power-up is the perfect way to super-charge your NetBackup deployment – so you get the greatest return on your investment.

You'll receive a one-to-one remote consultation with NetBackup specialists from Veritas and Bytes to explore your needs and current environment. We'll then visit you to present key findings.

Five things you'll receive – **and it's all free of charge**

1 - Valuable licence health-check

Do you want to avoid unbudgeted spend, plan ahead effectively and get peace of mind over your licensing? We'll explain how you can stay in greater control.

2 - Backup performance bench-test

Keen to know which of your backups could be faster? We'll score your environment so you can view success rates, as well as the quickest/slowest backup jobs.

3 - Optimisation hit-list

Want to identify key improvements within easy reach? We'll reveal any optimisation opportunities you've been missing in areas such as innovation, savings, deduplication, and protection for your virtualised environment.

4 - Key insights into new ways to unleash greater performance

We've been keeping some things under wraps. But now's the time to share everything with you. We'll show you a revolutionary development with Oracle databases, new data mapping advances, a surprising test/dev dividend and much more.

See next page for full details

5 - Essential contacts review

Need to know exactly what you own – and who to call? We'll ensure you have all the right contacts for our NetBackup account teams and support.

New ways to unleash greater performance

What will enhance your business tomorrow? As part of your NetBackup Power-up, we'll reveal a raft of measures you can use to enrich your strategy and achieve substantial benefits.

Discover an effective alternative to DIY

Looking for the perfect converged backup platform? Now you don't need to face the constant design and compatibility challenges and excessive costs of building a backup capability in-house. We'll show you the major benefits of deploying a converged backup platform and purpose-built backup device.

Get more from Oracle

Does some of your most important information live within Oracle databases? If so, discover a revolutionary new 'copilot' approach to database backup and recovery that will enhance backup performance significantly and save you money.

Transform data sprawl into data gold

What are you doing with your data protection copies? Why not make them available for test and development — or for insightful data analytics? We'll show you how copy data management can unlock the hidden potential.

Enhance your decision making

Want to instantly recognise areas of risk, waste, value and opportunity across your data environment with near real-time mapping — so you can make smarter decisions, faster? It's now possible, thanks to new InfoMap technology that uses powerful metadata from the NetBackup catalogue.

Bring dark data into the light

Do you have a growing sense of urgency over how to manage increasing amounts of unstructured data — where its owner and value to your business is murky at best? We'll show you how to shine a torch into the issue so you can reduce costs, minimise risk and achieve compliance.

Maximise your ROI using training

Boosting the skills of your technical team will increase your return on investment, while certification demonstrates your capabilities. We'll explain the latest NetBackup training options, which include instructor-led sessions, quick-fire eLibrary modules, private tuition and training credits.

Working with Bytes

With Bytes, you've got an expert on your side. As a Premium Partner, we hold over 75 technical and sales accreditations for Veritas. And we were named as Veritas EMEA Partner of the Year 2016

VERITAS™

PARTNER OF THE YEAR
EMEA | 2016
