

Automating Microsoft App-V sequencing with **CONVERSIONBOX**

MICROSOFT **APP-V**

DO YOU WANT TO VIRTUALISE APPLICATIONS **FASTER** **FOR LESS COST?**

If so, Bytes can help you:

- Reduce the time it takes to sequence Applications to App-V from hours down to just a few minutes per application by automating over 50% of conversions
- Utilise existing resources more effectively. Detailed pre-conversion report showing which of your desktop applications can be automated, plus all errors/issues for remaining applications to be converted to App-V manually
- Through the entire process from application discovery through to end user testing and deployment

AUTOMATED SEQUENCING

Accelerate Windows migrations

Don't let application sequencing become the bottleneck on your Windows migration. Our automated 'on-demand' service can race through up to 250 applications per day

Accurately plan project costs and timings

Regardless of the size or complexity of your applications estate, pre-conversion tests give you detailed reports showing you what can be sequenced, how long it will take and how much it will all cost, by actually installing each application on the Operating System

Reduce packaging errors

Pre-conversion reports alert you to potential application issues prior to the start of manual App-V sequencing

Best-in-class automation

Automation is delivered using Autonaware's ConversionBox. The fastest, most accurate application sequencing solution available today

A step by step approach to App-V sequencing

FEASIBILITY TESTING:

Bytes will run a pre-conversion analysis on your desktop application source files. You will receive a report detailing how many applications can be auto-converted to App-V; how many manually; how many cannot convert.

SEQUENCING ESTIMATE:

Bytes will provide a quotation showing you the time and cost to convert your applications to App-V, based upon the pre-conversion Report supplied.

AUTOMATION:

Automated conversion of all your applications that can be automated, at a rate of up to 250 per day.

MANUAL SEQUENCING:

Where required, the provision of an onsite/offsite manual App-V sequencing service is also available.

UAT:

All converted applications are passed to UAT for testing by users. Feedback is provided to Bytes and any issues can be remediated here possible.

Automating Microsoft App-V sequencing with **CONVERSIONBOX**

CONVERSIONBOX

ConversionBox is a unique end to end, hands-off, application source file to App-V conversion tool which mimics exactly what an App-V Sequencer does on a clean machine for every application. A folder of apps, including a mix of MSI's, .exe's, VB scripts, cmd scripts & .bat files, is simply drag & dropped into ConversionBox and the sequencing process automatically delivers exactly what a sequencer would expect to, with all the expected output files available for App-V 5.X /or 4.6, with the ability to edit where required. A hypervisor is included within ConversionBox, without a requirement for additional vendor licenses. Additionally, the reporting functionality shows which apps have converted (or haven't) & any errors found.

Key Features

- Automatically convert .exe's, MSI's and scripts to App-V 4.6/5.x
- Full batch conversion automation for .exe's, MSI's and scripts 32 bit & 64-bit App-V Sequencer support
- Just requires access to the applications source files, plus prior knowledge of main installer files and any customisation/ pre-reqs for fast and accurate reporting and conversions
- Pre-conversion test includes the actual installation of each application
- Full list of errors and potential issues per applications.
- Conversions of complex multi-chained installations (installing pre-reqs on the Virtual Machine before converting)
- Perfect installation path resolution for MSI's
- Automated silent installation for .exe's
- Can also create App-V MSI's
- Conversions of complex applications that require user input (license keys; installation steps, etc)

Receive a **FREE** analysis of **ALL** the applications you want to convert to App-V.

The full report will tell you:

- How many of your applications are guaranteed to convert ready for 4.6/or 5.x
- How many App-V conversions can be automated for accelerated sequencing at a rate of 250 per day!
- How many will be subject to errors or issues but can still successfully be converted using automation by bypassing errors/issues
- How many can not be automated but still be converted using traditional manual sequencing
- How many can not be sequenced for App-V.
