SAY 'YES' TO THE CLOUD WITH CONFIDENCE

Take control in the Cloud with Bytes

In today's threat landscape and given increased data security legislative pressures, Data Security is simply too important a task to leave to cloud infrastructure providers.

Cloud and virtualisation gives you agility and efficiency to instantly roll out new services and expand your infrastructure. But the lack of physical control brings a host of security issues – data co-mingling, privileged user abuse, data deletion, data leakage, geographic regulatory requirements, cloud super-admins, and many more.

Cloud Security Challenges

Data Discovery

What sensitive data do you have in the cloud?
Who is accessing that data?
How are they manipulating it?

Network Security & Threat Prevention

What is moving to, from and within your virtual datacentres and cloud apps?
How protected are you against malware & advanced threats?

Cloud Access

How can I ensure secure, easy access to cloud based resources?
How can I manage third party access & balance the needs of multiple users?

Recovery & Redundancy

How to ensure a reliable, secure, constant cloud connection?
What do I do when my cloud service provider fails? How to recover?

Data Loss Prevention

How can I ensure data is not lost, stolen or misused?
How can I plug critical security gaps in cloud applications?

Encryption

How can I ensure encrypted data in the cloud is secure?
How can I retain central control over data in the cloud?

Our Cloud Security Partners

Ensure your cloud journey is a smooth one. Speak to Bytes to design your cloud with security in mind.

Bytes offer a comprehensive suite of technical services and cloud security solutions with our cloud security partners.

- Network Security & Threat Prevention
- Data Loss Prevention
- Data Discovery
- Cloud Access
- Encryption
- Recovery & Redundancy

Establish trust in the cloud with Bytes

Ensure the same level of security in the cloud as on-premise

Bytes Cloud Security solutions turn any cloud environment into a trusted and compliant environment by solving the critical challenges of data governance, control, and ownership.

Bytes Cloud Security Solutions:

Network Security & Threat Prevention

Know what is moving to, from and within your virtual datacentres.

Protect cloud based assets and data traffic from advanced security threats.

Cloud Data Protection

Ensure data is just as protected from loss, misuse or theft in the cloud as on premise.

Easy to manage enterprise grade DLP for public, private and hybrid cloud

Cloud Data Discovery

See where your sensitive data lives in the cloud, who's accessing it, and how to lock it down.

Cloud Access & Authentication

Let employees access the cloud apps they need (and not those they don't).

Secure and easy access to virtual datacentres and software-as-a-service applications.

Cloud Encryption

Enterprise-grade encryption for data at rest and data in motion, with centralised control of all encryption keys.

Cloud Connectivity & Recovery

Ensure strong, secure connections to cloud based resources and plan for the unthinkable.

Backup & recovery of systems in seconds, minutes, hours or days.

Why partner with Bytes for Cloud Security

Pro-Active account management for the life of the relationship with us - real understanding of your business

Tier 1 status partnerships with world leading vendors - high commercial value and indepth knowledge

True technical expertise - all consultants minimum five years' technical experience with technologies

Technical Service Services across all solutions, from security strategy planning to training courses

Direct to engineer support which reduces time to fix. Speak to experienced engineers on all support calls.

No hidden costs on scope and on time project delivery. You get the exact solution you paid for, exactly when you need it

Unparalleled understanding of your business and bespoke personal service - high customer satisfaction.

Move to the cloud with full confidence in your data security speak to a Bytes Check Point specialist today
