## Bytes and F5 Networks – what we do

**Whether you are looking to deploy SSL VPN's, Secure and Optimise Microsoft Exchange or Sharepoint, maximise the security and availability of your cloud-based applications or secure and accelerate web applications, Bytes Security Partnerships can build & support a tailored solution for your requirements.**

Bytes accredited consultants and account manager can help you create an agile IT infrastructure using F5 solutions to drive your applications forward and ensure the security of your business applications.

The result – customers can securely scale and adapt their business applications on demand and ensure applications stay secure, fast, and available.

In collaboration with F5, Bytes help customers create an agile IT infrastructure both on premise and in the cloud that aligns with their business demands, and is built with security first in mind. With F5 solutions such as BIG IP Local Traffic Manager and Access Policy Manager in place, Bytes customers gain strategic points of control wherever information is exchanged; from client devices and the network to application servers, to public and private cloud applications and everything in between.

**Our solutions enable customers to focus computing resources and capacity where they are most needed, thereby increasing application security, reducing expenditure, simplifying IT management and enabling greater business agility.**

## Bytes F5 expertise

### Audit and Risk Management

Start your security journey by understanding where you are, what you need to do to achieve security and how to avoid pitfalls along the way.

### Design and Define

Your account manager and assigned technician will map out the technical aspects of your environment and define the technology required to meet your business goals.

### Install and Implement

The security technology you want implemented seamlessly into your environment with minimum fuss and within your time frames.

### Manage and Maintain

Every security product we recommend can be supported, monitored, upgraded, backed up and configured by Bytes accredited & experienced consultants.

## Organisations work with Bytes and F5 to:

**Provide continuous, secure access to applications for both onsite & mobile workers**

**Reduce storage costs and simplify data management**

**Ensure constant application availability and reliability**

**Scale applications - accommodate business growth and change more easily**

**Take full advantage of cloud technologies – with optimal performance and security**

**Optimise virtualised server environments through dynamic provisioning**

**Protect their business applications from DDoS attacks**

**Protect their own assets and customers from web and mobile fraud online**

**Secure their critical web applications – ensuring smooth online transactions**
