Bytes Security
TECHNICAL SERVICES & CONSULTING

Faced with an ever more challenging security and attack landscape?

Speak to Bytes Security Partnerships Technical Services team. Their role is to deliver the best solutions to secure new business opportunities and protect businesses from the latest security threats.

Our Technical Services Team is a highly experienced group of accredited engineers devoted to maximising the return on every technology investment. We apply our proven consultancy methodology to define, deliver and implement the right security technologies for your business challenges, from network security to application delivery.

Bytes customers get the right technologies to meet their business and security needs, tailored in the right way to work optimally for their business, and have the knowledge to manage them effectively.

Where Technical Services can help

Audit and Risk Management

The digital landscape creates great opportunity. With this opportunity comes new risk: that the data and systems we rely on will be compromised in ways that are increasingly difficult to defend against. Turn to Bytes to start your security journey by understanding where you are, what you need to do to achieve security and how to avoid pitfalls along the way.

Design and Define

Your account manager and assigned technician will map out the technical aspects of your environment and define the technology required to meet your business goals. Following this your detailed project plan is created with clear step timeframes, responsibilities and actions to achieve your objectives.

Install and Implement

The security technology you want implemented seamlessly into your environment with minimum fuss and always on time. We ensure we successfully install your solution within your time frames. With over 16 years experience across all sectors and company sizes, whether you're a large multi-site organisation or an SME you can be confident we've successfully performed an install like yours.

Manage and Maintain

We make management easy. Every security product we recommend can be supported, monitored, upgraded, backed up and configured to best practice by Bytes accredited & experienced consultants. We also offer technology training, knowledge transfer and review services so customers can operate their new technology optimally.

Bytes Security
TECHNICAL SERVICES & CONSULTING

Why Bytes security engineers?

Because information security is all we do, the UK's most skilled, knowledgeable accredited security practitioners work at Bytes Security Partnerships to find a rewarding career in their area of specialism.

Our knowledgeable Technical Services Consultants each bring years of experience in real-life enterprise environments, hold multiple security vendor accreditations, have added value in hundreds of installations and security projects UK wide and are committed to providing the highest level of consultancy possible.

Our approach to consulting

Listen - understand your current estate as well as future business and security needs.

Define - identify your risk exposure & prioritise actions to meet best practice - present and future

Check - All of our recommendations are in tune with your commercial goals

Deliver - practical solutions measured against agreed controls

Manage - with you every step of the way to manage any development needed

Monitor - everything we do, short sharp fix or strategic engagement, to ensure goals are met

This approach delivers

Visibility - identifies risks to your assets to prioritise resources

Justification - business linked rationale to inform investment decisions at board level

Efficiency - optimises the use of your available resources, ensures new solutions integrate

Agility - align security with your commercial goals so you can work without constraints

Skills - transfer our knowledge to your team in a structured way so they operate effectively

Compliance - checks and meet your business standards and regulatory requirements
