

VERITAS™

The truth in information.

What's new in Veritas Backup Exec™. Backup without barriers.

Cloud. Virtual. Physical.

Just **BE** Unified.

The choice you need for today's complex ecosystems

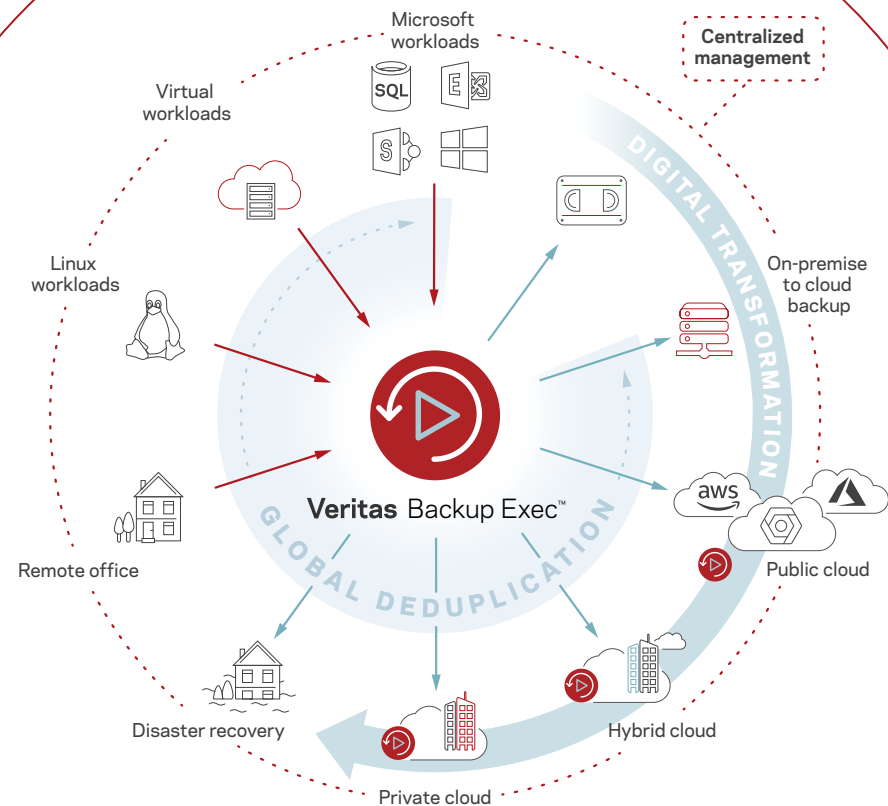

Remove the complexity of backing up physical, virtual, cloud, and even multi-cloud environments, with Veritas Backup Exec: BE.

One solution, with one interface, that gives you all the choice you need to backup, protect, recover and gain visibility across all your data environments, however diverse. Fast.

Choose what to backup, where to store it, and even how to pay for it with the choice of perpetual or term subscription licensing and the level of functionality you require – packed into Bronze, Silver and Gold editions.

Whatever you choose, you stand to gain comprehensive protection against external threats. So if the unthinkable happens, your critical data everywhere is backed up and ready to be recovered.

Backup without barriers. Just BE. And experience the 59% improved TCO it can offer over its closest competitor¹.

Veritas Backup Exec

Veritas Backup Exec gives you the ability to backup and recover everything, everywhere, instantly – however widespread your data estate.

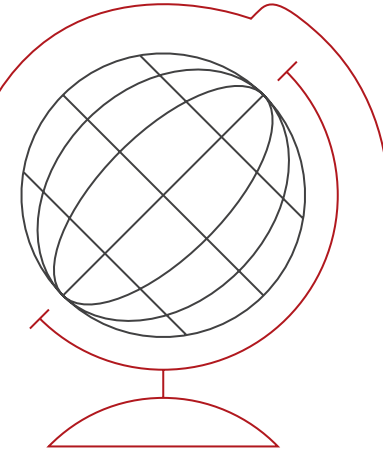

Your data remains secure and available at every stage – whether backing up to the cloud, protecting workloads within the cloud, recovering from the cloud, or connecting to on-premise storage.

One simple solution. One simple interface.

- Enhanced deduplication to on-premise storage, as well as to public and hybrid cloud, is available with all license options. Maximising the benefits of cloud and minimizing the cost of on-site storage
- Seamlessly scale Backup Exec to the cloud and choose from a range of fully tested and certified integrated cloud connectors, including AWS S3, Microsoft® Azure, Google Cloud Platform Storage, and many others.
- Added platform support for SQL 2017, Windows Server RS3 parity support, and VMware vSphere 6.5 U2 for simplified integration on any platform
- Simplified subscription licensing options, so you can choose how you pay, and how much you pay.

Complementary Veritas products now give you even greater confidence that your data is fully protected, visible and easily located:

- Veritas Information Map™ – which can now be integrated with Backup Exec, lets you visualize your entire data estate – supporting your strategies for GDPR and other data regulations
- SaaS Backup to protect the data running across all the most popular SaaS applications, including Salesforce and Office 365
- Desktop and Laptop Option (DLO) ensures that your endpoints are as secure as the rest of your data estate
- Access, so you can offer access to data regardless of where it resides – on-premise, off premise, or in the cloud – improving application performance, cost efficiency and scalability.

Veritas Information Map

Clearly visualize even the most complex multi-cloud data environments.

Now available with Backup Exec integration, Information Map captures all your data, whatever it is, wherever it is, and turns it into exactly that – a clear, easily understood map.

An immersive, visual experience, delivered via a single dashboard, Information Map provides a complete picture of the data residing across all your storage environments – multi-cloud, virtual and physical – making guess-work a thing of the past and helping to keep you compliant.

- Discover 100 million items in as little as 24 hours – faster than any scan or index, without the need to scan the entire network
- Access a broad range of connectors – available and manageable in the Connection Center – with a single click to get insight across every data environment
- Drill down into and explore even the metadata attributes of your information by file type, ownership, access, age, location and more

- Drive the kind of multi-tiered, nuanced data investigations and insights vital to cohesive compliance strategies...
- ...right down to instant calculations providing the estimated cost of your data aggregations
- Perpetual monitoring and real-time updates ensure you're kept fully informed without any extra admin requirement.

Veritas SaaS Backup

A single, simple solution to backup Office 365, Google Cloud G Suite, Salesforce and other SaaS applications.

Support your SaaS deployments with an independent solution to backup and restore your data down to the level of a single user, file and point in time.

With SaaS Backup, you keep control of all the business data running across your SaaS platforms.

- Incredibly simple to use – getting set up and choosing which services to backup takes just a few clicks
- Rewind your backup data and view it in real-time to find the exact point in time you need to restore
- Preview files to help save time. If a user needs a specific version of an email or PPT, you can restore that one file. User permissions mean that only those with authorisation can preview files, helping to protect confidential information

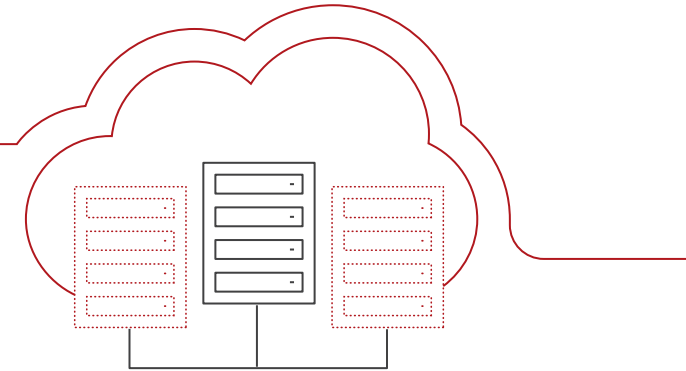

- Drill down by SaaS platform, user, file type, date and time – to find the exact file, at the exact point in time for the user who needs it
- Enhanced de duplication means only missing files are restored
- Share files directly from SaaS Backup via a secure link so users can access the information they need and carry on working.

A combination of features to protect you against the threat of ransomware, human error, and support your data compliance strategies with less effort.

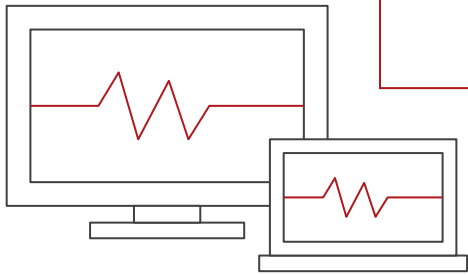

Saving your time, not adding to it.

And, most vitally, saving your data.

Veritas Desktop and Laptop Option (DLO)

Protecting all your end points with simplified management, and making user access to backed up files even easier.

Where does your data go when your employees take their laptops home at night? With DLO, you can protect the data running across all company devices, Mac and Windows, so everything is backed up, all the time, in case a device is lost, stolen, or falls victim to a ransomware attack.

The solution offers:

- Continuous data protection
- Non-intrusive agent operation
- Self-restore capabilities
- Open file backups
- VIP user support
- Endpoint migration utility

New in the latest release

Improvements made in the latest release means users can also enjoy accelerated backups, and automated reporting. While parallel restores enable the administrator to initiate multiple restore jobs at once, and high server scalability means a single DLO server can now support over 100,000 endpoints.

Easier access to files for users

The DLO mobile application gives users instant access to backed up files through an Android or iOS mobile device – removing access limitations to DLO-installed machines only.

Web restore means users can access backed up files through a web browser, for quick restore wherever the user is, on any device, with no need for Admin support.

Easier management

An admin dashboard gives your administrator quick status of the DLO deployed environment from an operational, deployment and capacity planning perspective. While a DLO diagnostic tool provides the status and accessibility of various services, providing diagnostics for the preliminary investigation by the administrator or user. Diagnostics is further enhanced with one-click feature to quickly analyse the entire DLO environment with a single mouse click.

All helping to save time, and save data.

Veritas Access

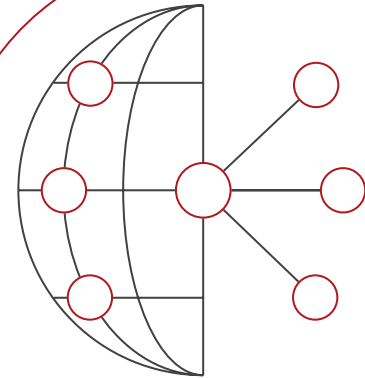

**Access to data wherever it resides –
on premise, off premise, or in the cloud
– improving application performance,
scalability and efficiency.**

Veritas Access enables you to meet the individual performance and capacity demands of transactional and analytical workloads, with easily managed access to data, no matter where it resides. It's especially useful if you are currently leveraging two or more cloud infrastructure vendors to support your workload requirements.

- Boost performance for legacy and new age applications with the ability to serve multiple unstructured data use cases
- Seamlessly move data to and from all the popular private and public cloud platforms
- Save money by intelligently moving files to lower-cost disks or the cloud

- Protect your storage investments with this software-only, scale-out NAS solution with multiple protocols
- Reduce complexity of your storage operations by bridging the gap between legacy and new age applications
- Achieve cost effective long-term data retention using Veritas Backup Exec™ integration.
