

Bytes FINANCE SUITE FOR AWS

Providing better visibility of spending patterns & consumption forecast

The cloud is unstoppable, but few companies know how to stay in control when costs evolve over time and begin to spiral. Bytes' Finance Suite for AWS offers three tiers of management on two pay-as-you-go service plans, enabling you to optimise cloud costs and report on a Global and OpGroup level.

1) Platform Management Integration Suite

We'll help you with your finance, budget management and control with:

- > On-demand analysis of your year-to-date consumption
- > KPIs for each business owner and service
- > Drill down capability by AWS service
- > Comparison of spend versus target
- > Root cause analysis
- > Right-sizing
- > Spend optimisation
- > Security compliance and scoring
- > Security best practice

2) Software & Spend Management Dashboard

The software and spend management dashboard aggregates this information into user-friendly dashboards depicting budget and spend information, KPIs as well as consumption by business units and owners.

3) Consumption & Spend Management Services

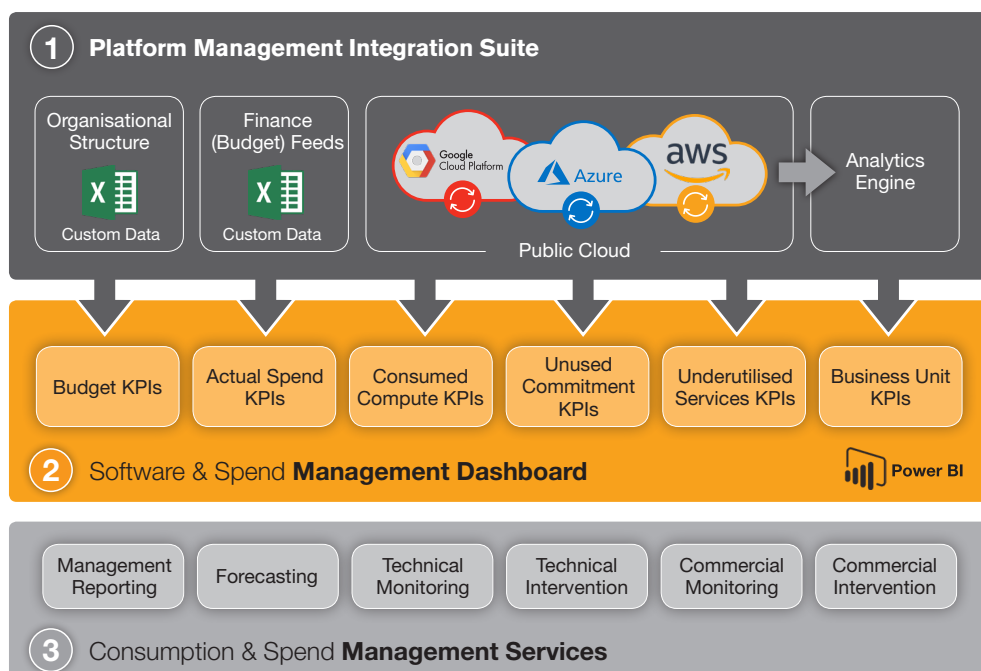

Finally, the consumption management tier provides management reporting, forecasting as well as optimisation recommendations and Root Cause Analysis for overconsuming resources.

What's more, it's easy to get started.

Our professionals delve beneath the surface of your cloud deployment and add immediate value, thanks to a combination of specialist knowledge provided by our experts and software developed in conjunction with our clients.

We can offer you:

- > **Consumption analysis**
- > **Budget analysis**
- > **Forecast spend analysis**
- > **Data analysis consultation**
- > **Cost optimisation**
- > **Asset management**
- > **Security and best practice**
- > **Procurement optimisation**
