

# Bytes **PAYMENTS & PCI DSS ADVISORY SERVICES**

**Streamline solutions, increase revenue and ease your compliance burden**

**Any forward-thinking merchant or service provider understands the value of being able to accept secure payments across multiple channels. If you're not at the leading edge, you could miss out on extra business as well as getting targeted by fraudsters. But Bytes can help.**

## **Payments world is changing**

The UK is moving swiftly towards being a cashless society: Cards, mobile transactions and new payment methods are growing in popularity. Meanwhile, out-of-region payment solutions and services - from China Union Pay to dynamic currency conversion - are becoming ubiquitous with consumer expectation for acceptance, but these solutions cause not only acceptance issues for merchants but new fraud attack surfaces.

In addition, GDPR and the Data Protection Act 2018 have raised the stakes. Suffer a breach and the likely fall-out and fines have never been more expensive or damaging to company reputations.

## **PCI DSS ... with a difference**

At Bytes, we recognise the importance of the Payment Card Industry Data Security Standard (PCI DSS). But we don't merely help you to jump through the hoops every year - just to gain compliance.

We understand the bigger picture: Secure payments must come first and then PCI DSS compliance is gained as a by-product of good practices. We'll help you to stay secure, so you can boost your bottom line.

## **Trust our expertise**

Our consultants have deep experience in the secure payment's arena, working with many leading organisations. Our team has over 11 years as QSA's and many have also been core PFI's, so you can avoid common mistakes and seize fresh opportunities.

Whether you are a merchant or a service provider, we'll help you to maximise revenues, prevent breaches and minimise audit costs. We're skilled in scope reduction, data discovery, solution design and testing.

## **The Bytes approach to secure payments:**

### **Grow revenues**

Let customers use their preferred payment methods, discounts and loyalty programmes across all your channels. Benefit from automated reconciliation to reduce team frustration and increase productivity.

### **Stay compliant**

Protect data as close to the inception point as possible. We'll help you to leverage compliant third parties - and use artificial identifiers to keep data safe.

### **Self-fund security**

Increase working capital and reduce the weighted average cost of credit (WACC) - which could help to self-fund the payment solutions you use.
