

Digital Workspace Services

Enterprises are going through a huge shift with Digital Transformation; new workstyles, new application types that embrace cloud services, new mobile workflows, and embracing on-demand IT delivery models.

However, as lines of business and even individuals and small teams embrace these innovations, without close cooperation with IT, the ultimate solution will suffer from poor user experience, poor integration, insufficient security and high costs.

Bytes can help provide services that offer frictionless access to all app types, as well as data and consumer-simple productivity that enables new experiences for the modern workforce. Security is enhanced through powerful contextual policy enforcement that manages apps and data in motion and at rest to reduce the risk of unauthorised access and data loss.

Multi-Platform Endpoint Management

We can help you on your Digital Workspace journey...

Bytes recommend that a Health Check be performed if you are currently involved in (or will be involved in) any of these projects:

- ✓ Deploying cloud-based apps without any centralised management
- ✓ Delivering new mobile or web-based applications
- ✓ Rolling out Office 365 and need control over how files are accessed, stored or sent
- ✓ Want to allow remote access to email from non-trusted or BYO devices
- ✓ Need to address the security of corporate data
- ✓ Supporting the use of mobile productivity apps similar to those used as consumers in a secure manner
- ✓ Planning for Android Enterprise X and how it will impact managed devices
- ✓ Enabling an identity infrastructure to support all app types
- ✓ Planning for Windows 10 migration

Once we have delivered this Health Check, we can compare your configuration to industry best practices and provide a corrective actions document to streamline and improve your environment.

We can also provide a number of tailored workshops and knowledge transfer sessions to your team to assist with the adoption and understanding of these technologies.

Top 4 digital experiences employees want improved

75%

Work remotely as easily as from the office

75%

Find and install new Apps when needed

74%

Availability of more mobile Apps to solve daily business tasks

74%

Getting new employees ready for work on day one
