

You see a growing sense of urgency to gain control of costs associated with storing and maintaining information along with a need to reduce the compliance and security risks.

But where do you start? Most of the information is dark data; no one really knows who the owner is and whether it's business relevant or not.

The Bytes Dark Data Assessment utilises industry-leading Veritas Data Insight, a tool that helps organisations improve unstructured data governance to reduce costs, reduce risk, and achieve compliance through actionable intelligence into data ownership, usage, and access controls.

Bytes Dark Data Assessment
