

Protect against threats with Microsoft Defender

An easy-to-use cybersecurity solution to help protect against, detect, and respond to cyberattacks.

IDENTIFY

Discover weaknesses that pose the most urgent and highest risk to your business with threat and vulnerability management.

Prioritise and remediate software vulnerabilities and misconfigurations, then proactively build a secure foundation for your environment.

PROTECT

Minimise the places where you're vulnerable across devices and applications with attack surface reduction to leave bad actors with fewer ways to perform attacks.

Help prevent and protect against threats at your front door with antimalware and antivirus protection on your devices and in the cloud.

DETECT AND RESPOND

Utilise endpoint detection and response to identify sophisticated threats and remove them from your environment.

RECOVER

Scale your security operations and recover from cyberattacks with automated investigation and remediation, which examines alerts and resolves attacks.
