

Bytes NHS Solutions

How to get the most from your N365 agreement

Now that you have invested in the EM&S suite from Microsoft, **how can you ensure you are seeing the full benefits of this software today?**

Are any of the following areas of significant concern?

- ✓ Deploying smart cards and integrating in to your VDI environment
- ✓ Ensuring security of medical data on screen at all times
- ✓ Running legacy apps on modern platforms
- ✓ Fast migrating Mobile Devices to Intune
- ✓ Gaining complete visibility of your environment

Issuing physical cards takes time and requires specialist printers

Virtual Smartcard virtualises the physical NHS smartcard into the cloud. This means users can access their clinical workspace and applications using a more convenient form of authentication like a smartphone, a HR issued card or a biometric.

Around half a million* desktop computers in the NHS are still running Windows 7, unpatched and insecure?

Containerising applications delivers numerous benefits. It allows Windows 7 apps to be securely migrated to Windows 10, and other device platforms, without the need for new or the refactoring of apps. It works online and offline enabling remote working in those rural areas where there is little or no connectivity. Above all else it delivers significant cost savings when it comes to deploying clinical apps, lowering infrastructure overheads.

Your employees work everywhere, does your data?

Never worry about an unlocked laptop or someone peeking over-shoulder. Laptops, Desktops and Tablets. Security should be seamless and not interrupt the jobs to be done. Shouldn't need usb, bluetooth or card-based hardware, nor do you need to remember passwords, pins or sequences. Continuously protect you both online and offline ensuring constant access to your work surface regardless of internet connection.

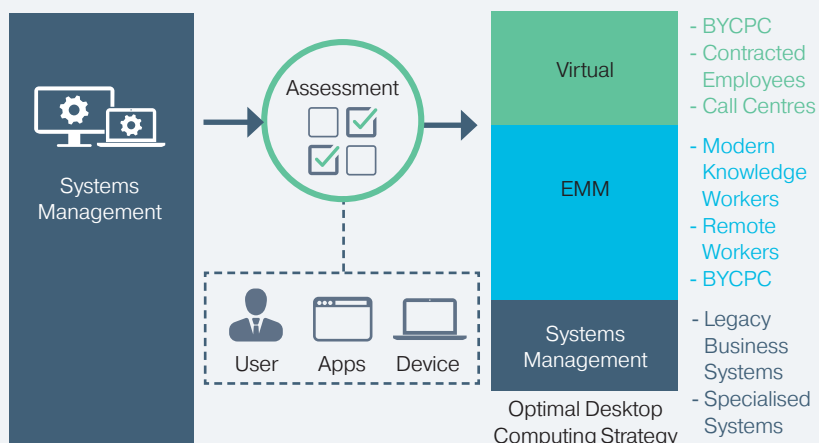

Migrating mobile devices without having to hard reset each device

Bytes can help streamline the migration process for both your IT team and your end-users which reduces error-prone tasks to a bare minimum. With a simple and frictionless process, we drastically decrease the timeframe needed for such a project.

Taking the Guesswork out of End-User Computing

Bytes will support customers through use of our free desktop assessment service. Your IT administrators gain a comprehensive understanding of the current end-user environment. This assessment allows for the identification of suitable or unsuitable devices, applications, users, and workloads - and provides technical analysis documentation and reports detailing a proposed migration plan.

- ✓ Gain key insights in your current environment used to understand right sizing and software portfolio
- ✓ Optional Add-ons allow inclusion of non-standard solutions and custom reports catered to the customer
