

Helping you with your workplace's future.

Enterprise Networking Workshop

At **Bytes** we strive to continually add value for our clients and as a result we can offer an **Enterprise Networking Workshop** to understand your workplace's future readiness. By focusing on your goals our workshop can be tailored to discuss any specific networking challenges/ plans you have for now and in the future.

Workshop Objective

We'll listen to your current challenges when it comes to your Networking strategy, then share current industry best practice that will support you in delivering that, which would include:

- Understand current Networking market
- Understand your current Network architecture
- Discussion of the possible approaches in regards to lifecycle refresh

Our consultants have an extensive range of experience and managing networking teams, so the workshop will cover real world examples to help support your challenges.

Process of the Workshop

An informal presentation covering network topics with an industry expert who will engage with you to share their expertise, general views and opinions.

Discussion around the latest network and cyber security scenarios, trends and threats.

How Bytes can help support the delivery of your business objectives will be documented post the session in the form of a summary report.

ULR Factors

- > Understanding licensing and subscription package contents
- > Highlighting End of Engineering and End of Life timeframes
- > Legacy or superseded product types
- > Opportunities for consolidation and reducing unnecessary expenditure
- > Misaligned renewal dates causing complexity
- > Support levels and whether they align to business needs
- > General best practices to address administrative headaches
