BYTES

Check Point Firewall Health Check

Our fully accredited **Check Point** engineers capture and analyse your firewall raw data to find predictive indicators of common firewall failures.

We check all important data points relating to core Check Point functionality including management, access control, firewall, and clustering.

We then walk you through a detailed report of your results including remediation recommendations, so you fully understand the next steps.

Unnoticed over time, many issues can develop that hamper your network performance. If left unchecked these can lead to business impacting events.

CHECK POINT™

What we Check

> Core OS Configuration

> CPU and Memory Utilisation

> Interface Health

> Packet Handling

> Routing

> Process Status

> Secure XL and CoreXL

> Cluster Operation

> Backup Operation

> Software Patching

The **Bytes** Check Point health check is a fast, non-disruptive process that goes right under the hood of your firewall systems, giving them a full MOT.

It highlights any lurking issues and ensures that everything is running as it should, giving you complete confidence in your firewall capacity.

Find out more about how Bytes can help you with our Check Point Firewall Health Check by contacting us today.

Clear, Tangible Results

Individual elements are classed as 'pass', 'fail' or 'advisory

✓ **Pass**
Peace of mind that this area of firewall performance is optimal

✗ **Fail**
A configuration that is unsupported and could lead to a business impacting event

! **Advisory**
A configuration that is unsupported and could lead to a business impacting event
