CLOUD SECURITY ALIGNMENT WORKSHOP
Get to know your security posture and pick the right solution for your business

With the ever-expanding list of intrusion techniques and layers of security available, it's important to ensure your business is covered. But as soon as you add cloud into the mix and begin considering the multitude of security offerings, working out your strategy can get complex – and complexity means an increased risk of vulnerability.

Whether you are planning your cloud migration or are already established, understanding your security posture and factoring in the shared responsibility model is essential to delivering a secure service whilst leveraging the many benefits of the cloud.

We're offering a Cloud Security Alignment Workshop to help you get the balance between security and technology right. During the workshop, we'll work with you to identify your security requirements and walk you through your options so you can take the steps you need to strengthen your security plan.

We'll explore the capabilities and benefits of the various areas of security, including:

Users
Identity & Credentials

Devices
Desktops & Mobile Devices

Network
Routers & Switches

Infrastructure
Servers & Services

Data
Data Storage

We want to maximise your existing security investment and ensure your infrastructure is (and stays) secure. By looking at these areas, we will identify any gaps and make product, policy and process suggestions accordingly.

The result and output of this session will give you a tailored solution recommendation report that details best practice guidance and vendor advice – this can be used to build your business case and ease the process of increasing security.

What to expect

Assess	Discover	Recommend
> Evaluate current requirements > Explore security roadmap > Run toolsets and assessments to gather data	> Deliver workshop and knowledge transfer > Analyse and discover gaps > Consider vendors and offerings	> Align appropriate technologies to create solutions > Provide a bespoke solution recommendation report to assist with business cases
